

TERMINAL A3 M6 10 PC.

Ref. 10338

❓ The **A3 M6 Cable Terminal** from Solter is the professional solution for making safe electrical connections in welding equipment. Its compatibility with M6 screws and robust crimping design make it an essential component for connecting ground or power cables in TIG, MIG, or MMA systems. Made of tinned copper, it provides excellent conductivity and corrosion resistance. **Pack of 10 units**, ideal for installations or maintenance work. Make reliable connections with Solter!

Main Features:

- ❓ **Direct application in welding:** perfect for ground connections, power terminals, or electrical panels in industrial and portable welding equipment.
- ❓ **M6 hole diameter:** fits standard screws for electrical installations in welders and control panels.
- ❓ **High-quality conductive material:** made of tinned copper to reduce electrical resistance and prevent oxidation.
- ❓ **Technical design for professional crimping:** enables a firm cable fixation without damaging the insulation or compromising electrical continuity.
- ❓ **Versatility and efficiency:** suitable for welding workshops, industrial maintenance, and general electrical projects.
- ❓ **Includes 10 units per pack:** designed for professionals who require reliability and performance in every connection.
- ❓ Solter develops specialized solutions for welders and electricians seeking safety, durability, and performance. Our terminals ensure a secure connection that withstands demanding conditions in electrical and welding environments.
